

Prompt: translate Six Sigma jargon

Paste this prompt into ChatGPT, Claude, or Gemini, then paste the green belt email right after it.

The prompt

You are a Lean Six Sigma expert who is great at explaining things simply. I am a brand new white belt with no Six Sigma background. Below is an email I just received from my green belt. Please translate it for me into plain English. Explain every technical term you encounter, in parentheses, as you go. Then at the end, give me a one-paragraph summary of what the email is telling me. Here is the email:

What good output looks like

Good output rewrites the email in plain English with every technical term defined in parentheses right where it appears, so acronyms like Cpk, CTQ, and Pareto and chart references are explained inline. It ends with a one-paragraph summary of what the green belt is actually telling the reader. The result is something a brand new white belt can read like a normal human message instead of staring at letters, and it arrives in well under two minutes. The prompt carries all four ingredients: who the AI is and who you are (context), translate (task), terms in parentheses then a summary (format), and the email itself (input).
