

Decode a charter: prompt

The exact four-part LENS decode prompt from the demo, ready to paste before the dense charter.

The prompt

You are a Lean Six Sigma expert and a friendly mentor. I am Priya, a brand new white belt who works in operations at a regional health system, and I have four years of frontline experience in the emergency department. Marcus, my green belt, has added me to a project to reduce ED door-to-doctor time across our three campuses, and below is the project charter he sent me. Please do four things. First, summarize the charter in three short paragraphs in plain English, defining any technical term in parentheses the first time it appears. Second, given my background, tell me what my specific role on this project is likely to be. Third, draft three smart questions I could ask Marcus at the kickoff that show I read the charter carefully. Fourth, tell me anything in the charter you are less confident about, so I know what to double check. Here is the charter.

What good output looks like

Four labeled parts come back. First, a plain English summary in three short paragraphs: the goal is to cut door-to-doctor time from 52 minutes to 30 across all three campuses within two quarters without making patients stay longer overall, and it matters because of patients who leave without being seen, lower experience scores, and roughly \$1.4M a year at stake. Second, the likely role: as a white belt with four years on the floor, Priya is the voice of the frontline who helps map how the process really runs, checks whether timestamps can be trusted, and pressure-tests whether a fix survives a busy shift, with reassurance that she is not expected to do the heavy statistics. Third, three smart kickoff questions (campus-specific baselines vs a pooled average; which of the three time segments is the biggest culprit; what we watch so we do not push up length-of-stay). Fourth, a confidence note flagging the \$1.4M figure as pending Finance, confirming the 42% reduction math is right, and noting that inpatient boarding is listed as a risk even though it is out of scope.
