

Draft an SOP card

The exact demo prompt: Priya talks to the AI the way she would explain the new process to a new colleague, then asks for a clean SOP structure.

The prompt

You are helping me write a standard operating procedure. I am Priya, a white belt on a project to reduce ED door-to-doctor time. Here is roughly how our new process works. The moment an emergency department doctor decides to admit a patient to the hospital, the charge nurse on duty is in charge of getting that patient a room upstairs. They note the time the decision was made, ask the unit upstairs for a room right away, and check back every thirty minutes until a room is assigned. If no room is free within two hours, they raise it to the house supervisor, the senior nurse who oversees the whole hospital that shift. And when one shift ends and the next begins, the charge nurse going off duty hands any room requests that are still open to the charge nurse coming on. Please turn this into a clear, professional SOP with a title, a purpose, a scope, the roles involved, and a numbered step-by-step procedure.

What good output looks like

In under a minute AI returns a professional document: a clear title such as Getting Admitted Patients a Room, Charge Nurse Procedure; a purpose that ties the procedure to keeping wait time small; a scope; a roles section naming the charge nurse, the house supervisor, and the unit upstairs; and a clean numbered procedure capturing the noted time, the immediate request, the thirty-minute checks, the two-hour escalation, and the shift-change handoff. Priya does not accept the draft as final. She reads it as the expert and adds what the AI could not know, for example that a dangerously unstable patient is escalated immediately rather than waiting the full two hours. The machine drafts; Priya verifies and owns it.
