

The Analyze Phase

Play detective with your data and hunt down the true root cause.

The Goal

Analyze is the third DMAIC step, where you take the data you collected and hunt down the absolute root cause. The root cause is the single foundational issue creating all the negative symptoms you can see on the surface.

The Pizza Surprise

In our pizza shop the data reveals something unexpected. The ovens are perfectly hot and the drivers are making fantastic time on the road. The pizzas go cold because they sit on the front counter for twenty minutes waiting for a driver to return. The root cause is not bad driving or bad ovens, it is a broken kitchen dispatch system.

Why It Matters

By ruthlessly analyzing the data you stop treating visible symptoms and finally uncover the hidden disease. This guarantees the fix you design next actually cures the real problem instead of acting as a temporary bandage.

Remember this

Treat the disease, not the symptom, let the data reveal the real root cause.
