

How To Think About AI

Setting the mental model for AI as your daily working partner.

The Third Pillar

With a solid foundation in Lean and Six Sigma, it is time for the third pillar of this course, using AI as your daily working partner. Working fluently with AI is a modern professional superpower that transfers to absolutely every job you will ever do, and it can pay back this course many times over.

What We Will Cover

This section builds the perfect mental model for what current AI actually is, including its incredible strengths and its deeply uncomfortable weaknesses. You will learn what AI is great at, mediocre at, and dangerously bad at, so you know exactly when to trust it and when to be skeptical.

Why It Matters

You will also study a real problem called hallucination through a story meant to disturb you just a little. Being cautious is the exact right approach. The goal is to walk away with a clear, honest picture of your new digital coworker.

Remember this

Master AI as a working partner, knowing both its superpowers and its blind spots.
