

AI Strengths And Weaknesses

What your digital intern is great at, mediocre at, and dangerously bad at.

Great At Drafting

AI is fantastic at drafting and structuring information, producing a polished first draft in seconds. Hand it your scrambled notes from a chaotic meeting and it returns a clean standard operating procedure. It is the ultimate brainstorming partner and is gifted at translating dense technical jargon into plain English anyone can understand.

Mediocre And Dangerous

AI is only mediocre at real arithmetic on real business data, because the model predicts words rather than acting as a flawless calculator. It is surprisingly bad at reading values off charts. It is dangerously bad at strategic judgment calls about your specific company, often presenting an uninformed guess with absolute confidence.

How To Use It

The golden rule is simple. Use AI for drafting, organizing, and structuring your thoughts, but never rely on it for a specific fact or a strategic judgment you cannot confirm yourself. You are the pilot and AI is your co-pilot. Your human judgment and frontline experience are the one thing the machine can never replace.

Remember this

Trust AI to draft and organize, never to give you a fact or judgment you cannot verify yourself.
